

Enrichment program

Department of Conservative Dentistry and Endodontics

Topic – BLS for Post Graduates

Date: 12-04-2022

Dental professionals should be prepared to handle various emergencies during routine treatment procedures. Sometimes these could be life-threatening situations too. Thus a Basic Life Support program was conducted on 12th April, in the Department of Conservative Dentistry and Endodontics to acquaint the Postgraduates with the manoeuvre of performing CPR and also handle other emergencies in a dental clinic.

Dr Sreedhar, Professor, Dept of Oral and Maxillofacial Surgery addressed the postgraduates. The life-threatening emergencies that can occur on the dental chair during the treatment were made explicit. A detailed presentation of the situations was explained. A live demonstration of the procedures was also given.

The program lasted for around 90 mins and was attended by all staff and postgraduates of the dept. The queries of the PGs were also addressed. We thank Dr Sreedhar and the Principal for providing this opportunity. Dr Sreedhar was later felicitated and a token of appreciation was presented. The program ended with thank note from Dr Lavanya, the Head of the Department.
